

QHSE POLICY STATEMENT

Goltens Green Technologies is a dynamic, innovative and market-oriented company, which is an independent part within the Goltens Group. Goltens Green Technologies helps ship owners to let their vessels comply with (future) environmental laws and regulations. For this purpose Goltens focuses, among other things, on the realization of projects related to the integration of ballast water treatment installations in existing systems on board vessels and installing scrubbers for sulphur and/or NOx emissions in exhaust gases.

The Management Team of Goltens Green Technologies is convinced that a policy focused on Quality, Health, Safety & Environment (QHSE) is important for compliance with applicable laws and regulations and reasonable requirements of employees, customers and suppliers. Goltens Green Technologies' QHSE policy is focused on controlling the processes of its QHSE management system, as well as to control and improve the services to its customers continuously. The personal safety and health of its employees, respect for the environment and compliance with applicable laws and regulations are considered to be equally important. With regard to this policy, Goltens Green Technologies also has the goal of meeting the international standard NEN-EN-ISO 9001:2015.

By formulating QHSE objectives for the several departments during the management review, this policy statement is implemented annually. The QHSE policy is reviewed on permanent suitability during the annual management review.

The Management Team has the final responsibility for the organization of QHSE management and therefore, apart from the proper functioning and evaluation, for the maintenance and continuous improvement of the QHSE system. For the execution of the above mentioned tasks, a QHSE manager has been appointed who, together with the Management Team, takes care of instruction and guidance of employees regarding the proper functioning of the QHSE management system. The Management Team commits itself to make the necessary resources and people available in order to maintain the QHSE management system.

It is our firm belief that through QHSE management (both the assurance and the increase in efficiency) we can guarantee the best service to our customers and suppliers, and can minimize the risks involved in performing our work to a minimum. The mentality of our employees is extremely important here: thinking and acting from a QHSE point of view must be in the blood of our employees. Information, training and addressing each other are essential for this. We remain working constantly on improvement of our Quality, Health, Safety & Environment performance.

We try to implement this by changing working methods or processes whenever necessary, in consultation with employees.

Maarten Jeronimus,
Managing Director
