**Applications**

The PSG governor is a speed-droop governor for controlling speed of small diesel, gas, and gasoline engines or small steam and industrial gas turbines, isochronously or with droop.

The governor is used to control engines or turbines driving alternators, dc generators, pumps, or compressors. Pressure compensation provides the PSG governor with the necessary stability to control isochronously. Optimum adjustment is attained by the proper opening of the needle valve. The temperature-compensated speeder spring minimizes speed drift caused by temperature change.

The governor has its own oil pump powered by the drive shaft, and requires oil from an external source (usually engine lube oil). An oil supply from a separate sump can be used.

Rotation of the drive shaft can be in either direction. The PSG governor can be fitted with check valves to allow drive rotation in both directions.

The manual speed-setting shaft can be on either or both sides of the case. The terminal shaft can be from either or both sides of the case.

**Description**

The PSG governor provides hydraulic powered travel in the increase-fuel direction only. A return spring is used to provide travel in the decrease-fuel direction. The standard PSG cover provides for a vertical return spring in the governor. Governor models are available with horizontal return springs, or the governor can be fitted with a customer supplied external return spring.

Spring-driven and oil-damped ballheads are available to filter out torsional vibrations. A special temperature-compensated needle valve can be supplied to compensate for temperature effect on stability.

**Droop**

Droop may be set in some governors with a permanent movement of an adjustment inside the cover. Other governors are equipped with externally adjustable droop. External adjustment is available on either side of the case. Droop is adjustable from 0 to about 7 percent in all governors.

**Speed Setting**

Electric speed-adjusting motors or pneumatic speed-setting is available for certain remote speed-setting applications. In most cases the speed-setting shaft does not extend from the case when other types of remote speed setting are used.

- Isochronous or droop control
- Pressure compensated
- Lever, motor, or pneumatic speed setting
- Temperature compensated
- Torsional vibration filter
- Rotary or linear output
- Cast iron or aluminum case
Specifications

SPEED SETTING

Manual  Either or both sides of the case: plain or serrated shaft; less than 45 degrees shaft rotation for full speed

Motor  12 or 24 Vdc Pittman Motor. Converter boxes are available to change supply voltage to the proper voltage for a Pittman motor

Pneumatic  Direct or reverse: 21 to 103 kPa (3 to 15 psi) most common signal; other signal ranges of 41 to 207 kPa (6 to 30 psi), 62 to 103 kPa (9 to 15 psi), 21 to 138 kPa (3 to 20 psi), 34 to 414 kPa (5 to 60 psi). Hydraulically damped against hunting due to air compressibility

GOVERNOR DRIVE

Shaft  Splined

Speed Range  1200 to 4000 rpm

Recommended Operation  1400 to 3600 rpm

Power Requirement  249 W (1/3 hp) to turn drive shaft at normal operating speed and temperature

Rotation  Clockwise, counterclockwise, or both

PILOT VALVE

Plunger Movement  Balanced between ballhead centrifugal force and speeder-spring force

Bushing  Rotated as part of governor drive shaft

Porting  Gain selection of 1, 2, or 4 round or 3 slotted

CONSTRUCTION

Case and base are cast iron, cover is aluminum or cast iron. Governors with aluminum cases are available.

MOUNTING

Install vertical or horizontal with power servo down.

CONTROL CHARACTERISTICS

Steady State Speed Band  ±1/4 of 1% of rated speed

Typical Optimum Response  6.5% off speed with 0.8 s recovery time with full load change on a 50% per second accelerated engine

Recommended Variable Speed Control Range  1200 to 4000 rpm

Pressure Compensation  Buffer spring 0.5 to 1.8 N·m (4.5 to 16 lb-in) with 1.1 N·m (9.6 lb-in) standard. Effective needle-valve opening up to 3 turns from closed

Droop  From 0% to 7% over full output travel; internal or external adjustments. External adjustment includes lock screw and max and min stop screws

Spring and Oil Damped Ballheads  Undamped natural frequency selections of 100, 180, 200, 290, 400, and 550 cycles per minute

A = OVERTRAVEL TO INSURE PRIME MOVER STOPS ARE REACHED
B = NO LOAD TO FULL LOAD TRAVEL = NORMALLY 2/3 OF FULL GOVERNOR TRAVEL IS RECOMMENDED
C = TRAVEL REQUIRED TO ACCELERATE THE PRIME MOVER
D = TRAVEL REQUIRED TO DECELERATE OR SHUT DOWN PRIME MOVER
HYDRAULIC SYSTEM

- **Oil**: From engine lubricating system or separate sump with foot valve
- **Supply Pressure**: Minimum of 172 kPa (25 psi), max of 517 kPa (75 psi) from engine lubricating system. Maximum of 305 mm (12 inches) of suction lift from separate sump. Torque and work capacity values vary according to supply pressure
- **Relief Valve**: Factory set for nominal 517, 1207, or 1896 kPa (75, 175, or 275 psi). Operating pressures are the relief valve pressures plus supply pressure to the pump
- **Flow at Normal Viscosity**: Peak demand of 7.6 L/min (2 USgal/min) during transients. 1.3 L/min (0.35 USgal/min) during steady state
- **Filter**: 40 μm (nominal) for 7.6 L/min (2 USgal/min)
- **Viscosity**: Must be between 50 and 3000 SUS. Normal performance is based on 100 to 300 SUS

OPERATING TEMPERATURE

Oil viscosity at operating temperature must stay within a 50 to 3000 SUS (Saybolt Universal Seconds) range. Ideal oil viscosity at operating temperature is between 100 and 300 SUS. Ambient temperature range is 29 to 93 °C (–20 to 200 °F). Consult Woodward if operating beyond these limits. Hydraulic fluid pour point must be below the lowest expected starting temperature.

OUTPUT

- **Terminal Shaft Linkage**: Plain or serrated
- **Return Spring**: 2.8, 5.6, or 8.5 N·m (25, 50, or 75 lb-in) torque at operating pressure of 690, 1379, or 2068 kPa (100, 200, or 300 psi) respectively

WEIGHT/MASS

- **Basic Manual Speed Setting Type**: Cast iron weighs about 6.1 kg (13.5 lb). Aluminum case weighs about 4.3 kg (9.5 lb)
- **Add**: Add about 0.7 kg (1.5 lb) for pneumatic or motor speed setting
